	Primary Examiner, Art U	nit 2621	

Continuation of 13. Other: The examiner respectfully disagrees with the applicant arguments. Schaffner meets the applicant's limitations as claimed. Schaffner teaches transmodulation which encodes and decodes the received signal. [fig. 2; col. 3 lines 42-53] It is well known in the art that a transmitted signal has an associated at least of: code rate, symbol rate and data rate. Being that Schaffner discloses that a QAM signal is modulated at least one of as claimed by applicant is disclosed. [col. 3 lines 42 - col. 4 lines 20; col. 4 lines 33-66; col. 2 lines 30-44] Taking Schaffner in combination with Kummer discloses a transmodulator with a DAC, the DAC teaching of Kummer is combined with the transmodulation device of Schaffner to meet the claim limitations. Both references fall within the same field of endeavor video processing. There is nothing presented by the applicant that prevents the DAC from being connected via another component to produce a signal that has been converted. It would have been obvious to one of ordinary skill in the art at the time the invention was made to combine the Digital to Analog Conversion teachings of Kummer with the transmodulation device of Schaffner allowing for improved coding efficiency and display of data. For the rational stated above the rejection of claims 1-29 and 68-83 is maintained
